Abstract

This letter is a response to the commentary by Jonson & Do (Johnson and Do 2020) on our paper, entitled “A Vietnamese human genetic variation database” (Vinh et al. 2019). The commentators concerned about two issues: Firstly, the relation of Southeast Asian (SEA) and East Asian (EA) groups to African and European groups; Secondly, the history of migration and settlement in Southeast Asia. Our responses will clarify both concerns from the commentators.
