## Abstract

Maternal infanticide and cannibalism, whereby a mother killing and consumes her own offspring, occurs in various animal taxa. The ability of the tree shrew (*Tupaia belangeri*) to kill and consume conspecifics is accepted, but the extent of its occurrence is not fully understood due to difficulty in observation and uneven reporting. Here we discover extra interesting phenomenon and that two tree shrew respectively eating the neonate in two different experiments. This was the first recorded of evidence by dynam
