

Table 3. Clinical sensitivity and specificity of the PRV triplex real-time PCR assay using nasal swabs collected from pigs inoculated with PRV JS-2012 or PRV Bristol. Pigs 24, 25 and 25 inoculated with PRV Bristol developed severe neurological signs on 6dpi and were euthanized. Two piglets inoculated with JS-2012 (#15 and #20) were euthanized on 5 dpi, and #13, 17, 18 and 19) were euthanized on 7 dpi. NA = Not available; S = Suspected, (+) = Positive; (-) = Negative
