

Covariate effects on CD4 disease progression

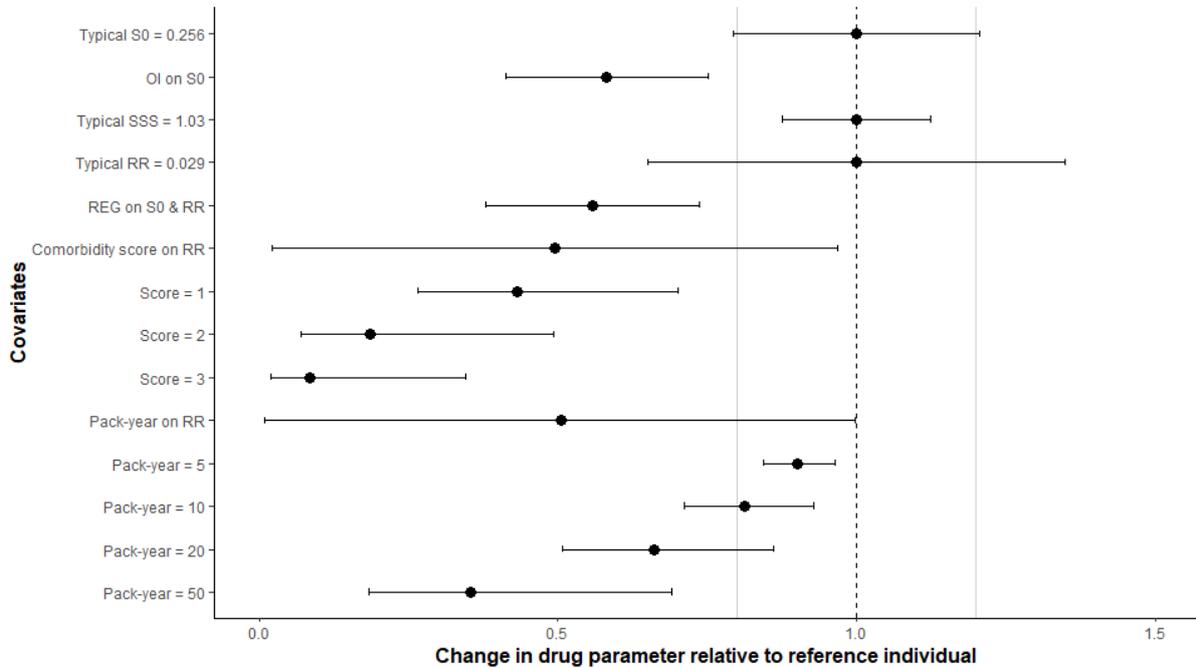

Typical individual: No history of OI, no comorbidity, no prior regimen before EFV

Note: S0 = nadir CD4; SSS = asymptote CD4; RR = recovery rate; OI = opportunistic infections; REG = regimen; EFV = efavirenz.

Covariate effects on CD4/CD8 ratio disease progression

Typical individual: No history of OI, no comorbidity, no prior regimen before EFV, non-smoker

Note: S0 = baseline CD4/CD8 ratio; SSS = asymptote ratio; RR = recovery rate; OI = opportunistic infections; REG = regimen; EFV = efavirenz.
