

Fig.1." : *ichthyosiform scales, follicular papules, and hair loss involving right leg.*

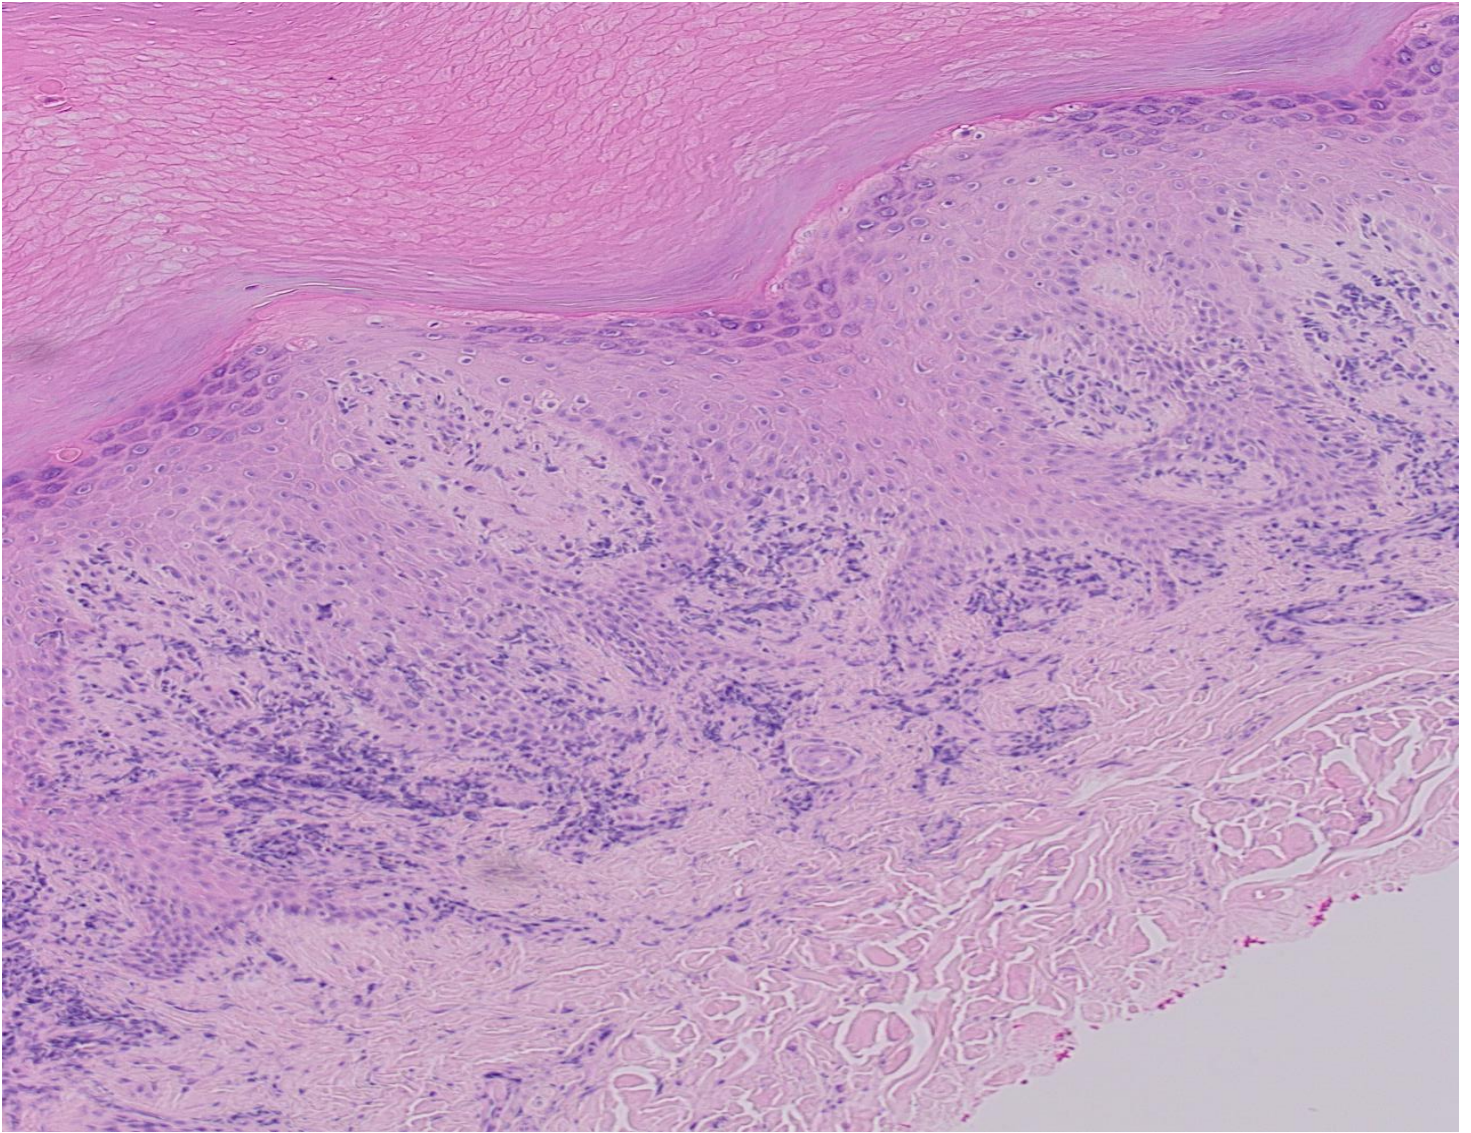

“Fig. 2.”: A) diffuse scarring alopecia involving the scalp B) dermatoscope shows peripilar cast with loss of follicular openings

“Fig. 3.” non scarring alopecia of right axilla also shows scattered follicular keratotic papules on the trunk which is seen in GLPL syndrome.

"Fig. 4." patchy alopecia with follicular papules involving pubic hairs

“Fig. 5.” Microscopic examination of a biopsy taken from follicular papule of right leg showed orthokeratosis, hypergranulosis, acanthosis and lichenoid infiltrate with necrotic keratinocytes (stained with Hematoxylin and eosin stain H&E)
