

Author acknowledgements

EL, NS and HS contributed under a contract with the National Aeronautics and Space Administration's Cryosphere, Sea Level Change Team, and Modeling, Analysis and Prediction Programs. They acknowledge computational resources and support from the NASA Advanced Supercomputing Division. HG received funding from the programme of the Netherlands Earth System Science Centre (NESSC), financially supported by the Dutch Ministry of Education, Culture and Science (OCW), under grant no. 024.002.001. PH, CLc and JVB acknowledge support from the iceMOD project funded by the Research Foundation – Flanders (FWO Vlaanderen) and the PARAMOUR project funded under the EOS Excellence of Science programme by FWO-FNRS, project number 30454083. NJ is funded by the French National Research Agency (ANR) through the TROIS-AS project (ANR-15-CE01-0005-01) and by the European Commission through the TiPACCs project (grant 820575). RC was funded by the PalMod project of the Bundesministerium für Bildung und Forschung (BMBF) with the grants FKZ 01LP1502C and 01LP1504D. TA and RW are supported by the Deutsche Forschungsgemeinschaft (DFG) in the framework of the priority program 'Antarctic Research with comparative investigations in Arctic ice areas' by grants WI4556/2-1 and WI4556/4-1, and within the framework of the PalMod project (FKZ: 01LP1925D). The work of TK has been conducted in the framework of the PalMod project (FKZ: 01LP1511B). AJP and AS are supported by the Natural Environment Research Council in partnership with the Centre for Polar Observation and Modelling and the British Antarctic Survey. SS and FP were supported by Belgian Science Policy Office and the Fonds de la Recherche Scientifique. RG and CC were supported by Japan Society for the Promotion of Science (JSPS) KAKENHI grant Nos. JP16H02224 and JP17H06323. RG was supported by JSPS KAKENHI grant No. JP17H06104, by a Leadership Research Grant of Hokkaido University's Institute of Low Temperature Science (ILTS) and by the Arctic Challenge for Sustainability (ArCS) project of the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) (JPMXD1300000000). BGF and CZ were supported under the Australian Research Council's Special Research Initiative for Antarctic Gateway Partnership (SR140300001) and received grant funding from the Australian Government for the Australian Antarctic Program Partnership (ASCI000002). DF was supported by an appointment to the NASA Postdoctoral Program at the NASA Goddard Space Flight Center, administered by Universities Space Research Association under contract with NASA. LT was supported under the NSF Antarctic Glaciology Program (2021699). TJB was supported both by the UK Natural Environment Research Council through the British Antarctic Survey research programme Polar Science for Planet Earth and the Scientific Committee on Antarctic Research (SCAR) AntClim21 Research Programme. Support for XAD, MJF, SFP and TZ was provided through the Scientific Discovery through Advanced Computing (SciDAC) program funded by the US Department of Energy (DOE), Office of Science, Advanced Scientific Computing Research and Biological and Environmental Research Programs. JMG and RSS were supported by the National Centre for Atmospheric Science, funded by the UK National Environment Research Council. RR is supported by the Deutsche Forschungsgemeinschaft (DFG) by grant WI4556/3-1 and through the TiPACCs project that receives funding from the European Union's Horizon 2020 Research and Innovation program under grant agreement no. 820575. MR received support from the Helmholtz Climate Initiative REKLIM (Regional Climate Change). The AWI-ISSM simulations were run on the DKRZ HPC system Mistral under grant ab1073. AB was supported by the US Department of Energy (DOE), Office of Science HiLAT-RASM project and Early Career Research program. NRG and DPL were supported by NZ Ministry for Business, Innovation and Employment contracts RTUV1705 ('NZSeaRise') and ANTA1801 ('Antarctic Science Platform'). GL and WHL were supported by the National Center for Atmospheric Research, which is a major facility sponsored by the National Science Foundation under Cooperative Agreement No. 1852977. Computing and data storage resources for CISM simulations, including the Cheyenne supercomputer (doi:10.5065/D6RX99HX), were provided by the Computational and Information Systems Laboratory (CISL) at NCAR.
