

Figure 1. Phytoplankton biomass distribution on the Agulhas Bank in autumn. (a) Surface calibrated-fluorescence FChl (mg m^{-3}) superimposed on an 8-day composite (28/2/2019 – 06/3/2019) of satellite Chl (4 km Ocean Colour Climate Change Initiative (OCCI) data); euphotic zone integrated biomass (g C m^{-2}) of each group (b) PRO, (c) SYN, (d) PICO, (E) NANO, and (F) CRYPTO. Bathymetry marks the 200 m isobath.
